tolerance of +5mm

FAQ's

What differences are there between the two drawer units? - The top unit has a cutout in the drawer to allow the unit to be positioned underneath a basin and accommodate the trap and plumbing. The bottom unit has no cutout, providing more storage space.

How are the units attached to each other? - The units are attached vertically with the fittings provided. Full fitting instructions are provided with each unit.

Possible Furniture Combinations & Important Information

IMPORTANT INFORMATION

- For 900mm combinations, it is important that the basin is positioned above a top drawer unit (ATD600) as the drawer box is designed to allow the plumbing to be connected below. The basin cannot be positioned above an open shelf unit (AOU300, AOU500) as the basin can only be centrally mounted above a drawer.
- For drawer units that are not positioned below a basin (such as in combination 7), a bottom drawer unit (ALD600) can be used to create more storage as the bottom drawer unit does not contain a cutout for plumbing.
- For the top drawer units with plumbing cutout in the drawer, it is important that a low profile trap is used with this unit. This prevents the trap from interfering with the drawer below and allows other drawer units to be attached unimpeded.

POSSIBLE FURNITURE COMBINATIONS

As a modular furniture range, Array furniture can be combined to form a number of different combinations of varying sizes. Each combination has a 550mm basin, a worktop and at least one drawer unit. Any units underneath basins need to be a Top Drawer Unit (ATD600) to allow for plumbing. Any drawer units underneath another drawer unit or not underneath a basin should be a Bottom Drawer Unit (ALD600). The combinations we recommend are shown below:
